

Wincor Nixdorf Store Vision POS Solutions

Company Overview

Wincor Nixdorf offers point-of-sale (POS) systems together with associated retailing software, information, and store automation systems. The company has extensive expertise in integrating store locations with companywide IT infrastructures so that retailers can better manage supply and demand chains, optimize efficiency, and reduce costs. The company also provides IT and business consulting services in selected countries, focusing mainly on SAP implementations.

Partner Solution Description

Wincor Nixdorf's STORE VISION program combines hardware, software, consulting, and other services that retailers need to address the changing dynamics that characterize today's retail environment. POS solutions are vital components of a retail company's IT infrastructure because it is at the point of sale or point of service where customers' needs can be readily identified and most easily addressed. As retailers continue to support conventional checkout operations, data from POS solutions is increasingly necessary to develop innovative new services, optimize costs, and deliver real-time information for business decision making. Retailers want to take advantage of technology while minimizing its cost and complexity.

Wincor Nixdorf POS solutions enable retailers to serve customers better—from accelerating checkout, providing self-service options, and delivering the information that customers need, where they need it. The STORE VISION solution has been tested to work with the Cisco PCI for Retail Solution, a set of recommended and configured architectures that incorporate Cisco and partner technology. These retail solutions support highly secure transport for POS traffic, such as credit card data, cardholder information, transaction logs, and database records.

Core Components of the Partner Solution

Wincor Nixdorf's POS solutions are based on a modular POS platform and TP.net software architecture.

BEETLE POS Family—Modular Systems

This PC-based modular POS system is built on PC standards to help ensure vendor-independence and to protect customers' investments in hardware and software. The platform is designed for high security and availability with features that support efficient maintainability, ease of use, integrated remote maintenance functions, and thin client concepts.

TP.net—The Store IT Platform for POS

The TP.net software architecture is based on independent components to simplify POS application deployment. By separating the user interface from business functions and technical services, applications can be adapted or upgraded without affecting customer service. This also permits flexibility for deploying self-checkout solutions, such as online or mobile POS, Master POS or client/server store floor configurations.

Related Cisco Products

- **Routing and switching:** Cisco Integrated Service Router with advanced communications and security capabilities
- **Network Management:** Cisco Security Monitoring, Analysis, and Response System and other products support network reporting, provisioning, policy and change management, and workflow tracking
- **Security:** Cisco ASA 5500 Series Adaptive Security Appliances offer firewall, Anti-X, intrusion prevention, and VPN capabilities
